

## EASY, FAST AND HASSLESS SCHOOL PAYMENTS

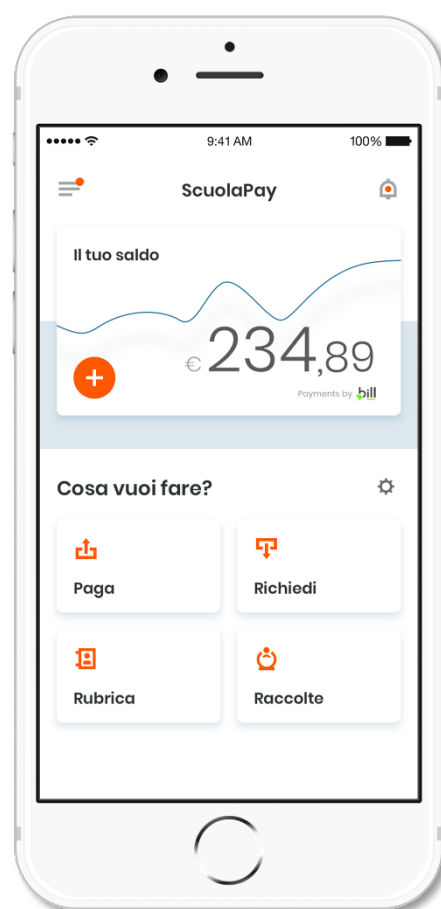

**SCUOLAPAY**, the payment solution that allows parents, class representatives and institutions to manage all school expenses from their smartphone. Including the purchase of books, tuition, materials and payments for workshops and teaching.

ScuolaPay is an innovative payment solution that facilitates both the collection of money between parents and class representatives (common coffers, collections, educational outings, gifts, etc.) and school payments (contributions, educational activities, purchase of books of text, programs for distance learning, etc.), directly from the smartphone in a simple and safe way.

It allows private schools to receive tuition payments without any fees and activation costs, reducing transaction costs. By integrating with accounting and fee management systems, it automates notifications of deadlines, receipts and collections, drastically reducing banking costs and administrative activities.

It will allow public schools to receive payments through pagoPA.

SCUOLAPAY can integrate with the accounting systems of institutions and automate the management of tuition payments and contributions, allowing schools to save hundreds of administrative hours and reduce bank costs.

The versatility and ease of use of SCUOLAPAY are the result of a development process that lasted over two years, during which maximum attention was also paid to the safety factor. ScuolaPay adopts the highest international security standards and all accounts and payments are managed by SisalPay S.p.A. through the Bill wallet and are regulated by the Bank of Italy.

It also facilitates the collection of donations for projects through crowdfunding from parents and supporters.

**ScuolaPay Business** is a SaaS Platform that allows schools to:

- Send payment notices to parents and get paid with one click.
- Eliminate late payment with ScuolaPay's one-click payment facility and automatic reminders.
- Set up installment and recurring payments
- Synchronize your ERP and accounting software for the sending of notices automatically
- Reconcile receipts automatically with ERP and accounting software
- Send an electronic invoice in the user's APP, combining it with the payments.
- Drastically reduce banking costs
- Save hundreds of administration hours
